

## Tariff Design and Assessment Tool Workshops – Dec 2019

CEEM is holding two workshops for the project "Developing an open source tariff design and analysis tool" in Canberra and Sydney to share the latest progress with the stakeholders.

The project, funded by Energy Consumers Australia, builds on the [earlier work](#) in developing a tool that stakeholders can use to assess the impacts of different network tariff proposals on end-users. The new version is in Python and extends the functionality of the previous tool by incorporating retail tariffs and wholesale energy market price, incorporating the impact of DER and DR, as well as a range of other enhancements. We therefore cordially invite you to attend these workshops. The workshops are free but require RSVP. Please send enquiries to [n.haghdadi@unsw.edu.au](mailto:n.haghdadi@unsw.edu.au)

### Canberra

**1:30pm - 3pm, Tuesday 3rd Dec, 2019 (side event of [APSRC](#))**
